Please find below and/or attached an Office communication concerning this application or proceeding.

# Office Action Summary

Application No.

09/286,418

Applicant(s)

KIFUKU, TAKAYUKI

Examiner

Brian J. Broadhead

Art Unit

3661

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

## Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## Status

- 1) ☒ Responsive to communication(s) filed on 21 November 2001.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

## Disposition of Claims

- 4) ☒ Claim(s) 1,2 and 4-20 is/are pending in the application.
- 4a) Of the above claim(s) \_\_\_\_\_ is/are withdrawn from consideration.
- 5) ☐ Claim(s) \_\_\_\_\_ is/are allowed.
- 6) ☒ Claim(s) 1,2 and 4-20 is/are rejected.
- 7) ☐ Claim(s) \_\_\_\_\_ is/are objected to.
- 8) ☐ Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

## Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on \_\_\_\_\_ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
- Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
- 11) ☒ The proposed drawing correction filed on 02 November 2000 is: a) ☒ approved b) ☐ disapproved by the Examiner.
- If approved, corrected drawings are required in reply to this Office action.
- 12) ☐ The oath or declaration is objected to by the Examiner.

## Priority under 35 U.S.C. §§ 119 and 120

- 13) ☒ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☒ All b) ☐ Some \* c) ☐ None of:
1. ☒ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- \* See the attached detailed Office action for a list of the certified copies not received.
- 14) ☐ Acknowledgment is made of a claim for domestic priority under 35 U.S.C. § 119(e) (to a provisional application).
- a) ☐ The translation of the foreign language provisional application has been received.
- 15) ☐ Acknowledgment is made of a claim for domestic priority under 35 U.S.C. §§ 120 and/or 121.

## Attachment(s)

- 1) ☐ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☐ Information Disclosure Statement(s) (PTO-1449) Paper No(s) \_\_\_\_\_.
- 4) ☐ Interview Summary (PTO-413) Paper No(s). \_\_\_\_\_.
- 5) ☐ Notice of Informal Patent Application (PTO-152)
- 6) ☐ Other: \_\_\_\_\_.

## DETAILED ACTION

### ***Claim Rejections - 35 USC § 102***

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

2. Claims 1 through 20 are rejected under 35 U.S.C. 102(e) as being anticipated by Kifuku et al., 5740040.

As per claim 1, Kifuku et al. discloses means of computing an estimated value of static friction of the steering system based on the steering force of a driver on lines 12-20, on column 2; and means of compensating for the static friction based on this estimated value of static friction on lines 34-39, on column 20.

As per claim 2, Kifuku et al. discloses the static friction of the steering system is estimated by extracting the edge of the steering force detection value on lines 45-46, on column 20.

As per claim 4, Kifuku et al. discloses the static friction of the steering system is estimated by extracting the edge of a motor current on lines 25-28, on column 21.

As per claim 5, Kifuku et al discloses the static friction of the steering system is estimated by extracting a edge of the steering force detection value, the motor angular velocity, the motor back electromotive forces, the steering angular velocity, or the motor

Art Unit: 3661

current wherein the extraction of the edge is carried out through a high frequency pass filter on lines 5-12, on column 6.

As per claim 6, Kifuku et al. discloses the time constant of the high-frequency pass filter is made almost equal to the mechanical time constant or acceleration constant of the motor on lines 55-62, on column 13.

As per claim 7, Kifuku et al. discloses the static friction of the steering system is estimated by extracting an edge of the steering force detection value, the motor angular velocity, the motor back electromotive force, the steering angular velocity, or the motor current, and the static friction of the steering system is estimated by multiplying an extracted value of the edge by a predetermined function of the motor angular velocity, motor back electromotive force or steering angular velocity on lines 33-39, on column 20.

As per claim 8, Kifuku et al. discloses there is an upper limit for the static friction estimated value on lines 1-5, on column 21.

As per claim 9, Kifuku et al. discloses the static friction compensation having a term proportional to the static friction estimated value obtained by the positive feedback of the static friction estimated value is computes and the static friction of the steering system is compensated by the static friction compensation on lines 47-52, on column 20.

As per claim 10, Kifuku et al. discloses the gain of the positive feedback is set such that the static friction estimated value and the motor output torque become almost

Art Unit: 3661

equal to each other on lines 47-52, column 20. Compensating for a friction is producing a force to counteract the frictional force. They would be equal but opposite in direction.

As per claim 11, Kifuku et al. discloses the static friction compensation obtained through the means of compensating for the static friction is obtained from both a term proportional to the static friction estimated value and a term for compensating for the nonlinearity of the motor or a motor reduction gear on lines 47-52, on column 20, and in figure 33.

As per claim 12, 13, 14, 15, 16, and 17, Kifuku et al. discloses the term for compensating for the nonlinearity of the motor or the motor reduction gear and an upper limit is used when the static friction estimated value is larger than a predetermined value and they are changed based on car speed or engine speed in figure 33.

As per claim 18, Kifuku et al. discloses the dynamic friction or inertia of the steering system is compensated based on the angular velocity or angular acceleration of the motor or steering in figure 31, item 13.

As per claim 19 and 20, Kifuku et al. discloses a term for compensating for dynamic friction, a term for compensating for static friction, and a term for the nonlinearity of the motor are weighed so that at least one of them is used in figure 31.

### ***Response to Arguments***

3. Applicant's arguments filed 11-21-01 have been fully considered but they are not persuasive. The argument that the static friction is estimated based on the steering force of the driver does not overcome the rejection. What the applicant now seems to

Art Unit: 3661

be claiming it just a conventional system of using the torque sensor to estimate a motor current to be delivered. Figure 42 of Kifuku et al. displays the conventional function that a torque sensor uses for figuring out an assist value.

### ***Conclusion***

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Brian J. Broadhead whose telephone number is 703-308-9033. The examiner can normally be reached on Monday through Thursday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, William A. Cuchlinski can be reached on 703-308-3873. The fax phone numbers for the organization where this application or proceeding is assigned are 703-305-7687 for regular communications and 703-305-7687 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is 703-308-1113.
